

Task Manager Application

1. Introduction:

This project basically is a Task Manager Application. Task Manager is used in almost all companies to manage the list of tasks. Goal of this website is to organize user tasks and control tasks for each user.

This project is very beneficial for any company and organization. Example: In every company, we have list of tasks to be done. So, we can see what tasks are done and what are the remaining to prevent redundancy.

2. Expected List of Features:

1. Login Page.
2. List all the tasks.
3. Add tasks to be done.
4. Remove tasks if done.

These features make the backend for any commercial project development and help to track the project progress easily. This is what helps a project to be completed on time.

3. Market Survey:

Five websites similar:

1. ToDoit
2. Toodledo
3. Any.do
4. Habitica
5. GoogleKeep

Each one of the above mentioned websites have a task manager. Every company use any task manager to maintain a smooth flow of any project.

4. References:
